Meet Össur's CTi Ambassador - Cody Cooper

Cody Cooper is one of the top-ranked motocross athletes in New Zealand. Since the age of four, Cody was encouraged to start dirt bike riding by his father, as a safer alternative to riding on the road. With 11 national titles under his belt and one Australian title, Cody says he still loves competing even at the age of 38, explaining "it's hard to stop doing something you love". His favourite accomplishment throughout his career was winning second to James Stewart at South Wick. Cody's message is "Work hard and do it for yourself and always make it fun".

Cam Bertuch's CTi Story

Cam is a highly active athlete, enjoying extreme sports such as skiing and dirt bike riding. Cam first injured his right knee in 1999 while training in the Olympic development team as a mogul skier. After an ACL rupture and meniscal injury, he had an ACL reconstruction only to have his ACL injured again 2 years later. After his second knee reconstruction, his knee was starting to lock and therefore needed to have his meniscus removed entirely. This meant for the last 10+ years Cam has been experiencing bone-on-bone osteoarthritis (OA) in his right knee that caused him frequent pain. After another ACL rupture in 2019 from dirt bike riding, this time on his left knee, Cam decided he needed knee braces to protect and support his knees if he wanted to continue skiing and riding.

Cam was fitted with the Össur CTi Custom knee braces and hasn't looked back! The CTi Custom braces have alleviated the pain on his knees and have given him much more confidence to pursue his goals. In 2021, Cam skied 29 days in the winter season and continues to ride dirt bike 3-4 times a week! Without the braces, he is likely to only be able to do these activities 1-2 times a month from the knee pain. Without a doubt, wearing the CTi Custom braces has significantly increased his quality of life and positively impacted his mental health as he can continue to be active and do the activities he loves. As the first custom fitted braces he's tried, Cam loves the intimacy of the fit, the comfort on his knees and is confident in the stability of the strong carbon fibre frame. They have absorbed the extreme forces of impact and protected his knees from further injury, giving him the confidence to ski and ride better without holding back.

Össur Academy Online Updates

Össur Academy Online have recently updated course offerings for existing customers and have added a link to some of the most viewed fitting

added a link to some of the most viewed fitting videos from YouTube on the one Workday platform. You can access specific fitting videos through [B&S's Academy Youtube on Academy Online](#).

For quick access to our learning management site visit [Workday](#). If you have not logged in to this before, it's as simple as creating a profile first and then having access at any time. You can also reach out to your local representative who can help you sign up for this educational platform.

MP45 Spinal Hyperextension Brace

Össur's [MP45 Spinal Hyperextension Brace](#) is constructed of lightweight aluminium and includes a padded pelvic band that may be locked in position. The angle of the sternal component may also be adjusted without bending to provide optimum positioning against the sternum.

The brace's unique sprint-controlled 'floating' pelvic band continually adjusts as the patient changes from standing to a sitting position - effectively eliminating the problem of upward brace movement without compromising brace function. Through the product's new fastening system and adjustment slots on the sternal component, the product allows simple and convenient height and width adjustment without component removal.

The product is available in an extended range of sizes, allowing simple off-the-shelf fitting for a wide variety of patient shapes and sizes.
