## Introducing the Miami TLSO 464

The Miami TLSO from Össur directly addresses the needs of patients and practitioners, simplifying preparation without compromising on fit or performance. This easy-to-use, pre-assembled Miami TLSO brace offers three configurations in one. These configurations provide the following benefits: compliance, adjustability and comfort.

Compliance: Easily applied in over-the-shoulder or underarm configuration, donning and doffing is further simplified with the

conveniently located quick release buckles

Adjustability: The universal belt designs allows for setting the belt length on the patient for a more accurate sizing experience

Comfort: Truly shaped to fit the anatomy, the anatomically contoured design better immobilises the spine while maximising patient comfort

Ease of Use: The Miami TLSO brace requires minimal preparation and is designed to provide optimal patient comfort

## Bracing Options for Prosthetic Patients

Since the Össur bracing division presented on "Bracing for the Contralateral Limb" at the AOPA Congress in March, we have received several enquiries from prosthetics clinics around options for prosthetics patients.

Our bracing team have identified a range of appropriate braces for either contralateral limb, or over sockets that include [Unloaders \(for OA\)](#), [CTI custom](#) or [OTS](#) (or other ligament brace options), as well as [AFOs](#) being the most common selections.

In the past, there have been a few limiting factors when considering bracing prescription for prosthetic patients include time, ability to apply for funding, knowledge of options or simply not knowing about the financial benefits. Our aim is to now make this process easier for you if you are indeed interested in offering and encouraging patients to consider bracing as a holistic approach to their care.

Patients who are funded by funding bodies including NDIS are eligible for bracing to be incorporated into their application. If your clinic is interested in developing this pathway further

please reach out to us to discuss the options available.

## ÖSSUR WEBINAR SERIES

### Lighten the Load: Can an Unloader Brace Improve Hip Symptoms in People with Femoroacetabular Impingement (FIA)?

#### Webinar Presenter: Jillian Eyles

Femoroacetabular impingement syndrome and symptomatic labral tears are common in the young, active population, however, there is very little evidence for effective treatments for these conditions. To address the pressing need to identify new effective treatments, we examined whether a brace can improve hip symptoms and is well-tolerated in people with femoroacetabular impingement syndrome or symptomatic labral tears. This parallel, two-arm, exploratory randomized trial recruited participants from the hospital and private clinics of orthopaedic surgeons and compared usual conservative care to usual conservative care plus a hip brace.

### Meet Össur's CTi Ambassador - Natalya Diehm

Natalya is an Australian BMX Rider who made history as one of Australia's first ever Olympic BMX freestylers debuting at the 2020 Tokyo Olympic Games. As one of only two Australian BMX Freestylers selected, Natalya became the first Australian woman to compete in the event. She lives in the Goldcoast, Queensland and is lucky enough to ride her bike everyday for fun and for work. Natalya loves to go to the beach, climb mountains, gym, and hang out with her friends outside of riding!

## Steve Rudd's Unloader Story

Steve lives an active life and enjoys golf, playing with his kids, working, and going for walks. He purchased the Össur [Unloader one](#) a year ago as advised by his orthopaedic surgeon to help with osteoarthritis in his left knee. Once fitted with the brace, he found new confidence in being able to move, play golf, keep up with his kids, work, and go for walks.

He shared with us that “In particular, the [Unloader one](#) brace is very comfortable, easy to adjust, and most importantly allows me to walk and jog which is something that was out of the question prior to wearing the brace.” The brace has allowed Steve to walk a full 18 holes around a golf course and keep active at work, walking 5 to 6kms per day.

After being fitted with the Unloader brace, Steve started a new job that required a lot of walking. He lost 5kgs within two months and told us that “this was all due to the Unloader brace allowing me to walk for hours without any restriction. It’s been a Godsend and I’m so glad I invested the money into purchasing the brace. Very happy customer!”

The fitting of Steve’s brace was “expertly carried out by the orthotist Charl who is a very experienced clinician in fitting these supports. He gave excellent advice about adjusting and cleaning the brace.”
