Waterproof Components

Whether it's freshwater, salt water or chlorinated water, Össur's newly tested waterproof component range including adapters, locks, and valves, will meet the demands. The use of marine-grade stainless steel screws across the range provides protection against corrosion even after submersion. Pair these components with a Pro-Flex XC foot to provide a waterproof solution to wear to the beach, pool, or even just for showering.

POWER KNEE™ Fitting Guidelines

The Power Knee™ is an actively powered microprocessor knee suitable for active amputees and designed to help them keep active. Propelled by a harmonic drive motor, Power Knee™ replaces lost muscle function throughout the gait cycle – it creates motion. A unique blend of motor, sensors, and responsive technology provides powered swing phase, energy returning stance flexion, powered stair ascent and powered sit-to-stand.

The Power Knee™ is now available for trials and fittings in Australia. The Power Knee™ Fitting Guidelines define the framework for best practice, the optimal training process to achieve successful outcomes.

Jason Parker's Pro-Flex® LP Torsion Story

Jason initially came to Össur after losing his left leg to

an infection in 2017. He later returned facing new challenges as a bilateral amputee, after losing his second leg in 2019. Achieving balance, confidence, and increased stability were most important to Jason. He was conscious of maintaining his limb health and preserving his knees in the long term.

This is where Jason was introduced to the Össur Pro-Flex LP Torsion feet, "I feel confident walking on my Pro-Flex LP Torsion feet, and I am not afraid to tackle anything that comes my way. I can wear my prostheses all day, I can easily walk around my home and at the shopping centre, I can travel, and I feel confident to attend music festivals and gigs!"
