

## GripLock Finger®

### Naked Prosthetics' solution for partial-hand limb difference proximal to the MCP joint.

The **GripLock Finger** is designed for digits two through five and is a passive positionable digit prosthesis. It is intended for use in conjunction with a custom fabricated socket which is fit by a certified prosthetist.

Users can position the finger into varying degrees of flexion by using their opposing hand or a hard surface. The **Griplock** Finger can then release to full extension by depressing the dorsal pawl (lever) or flexing past last locking position. Adding a **GripLock Finger** can restore length, encourage bilateral hand use and be a valuable tool for participation in activities of daily living.

This device can be worn in combination with our **MCPDriver**, **PIPDriver**, and/or **ThumbDriver**.

This design is optimised for high load carrying capacity. The **GripLock Finger** weighs in at 25 grams and a break strength of ~97 kg.

#### SPECIFICATIONS:

Load Rating: ~97 kg

Device Weight: 25 grams

Cycle Life: 300,000 cycles min

- Field serviceable fairings
- Silicone fingertip pad
- Machined aluminum
- Case-hardened stainless steel
- Conductive tip option for touchscreen use.
