

GripLock Finger®

Naked Prosthetics' solution for partial-hand limb difference proximal to the MCP joint.

The GripLock Finger is designed for digits two through five and is a passive positionable digit prosthesis. It is intended for use in conjunction with a custom fabricated socket which is fit by a certified prosthetist.

Users can position the finger into varying degrees of flexion by using their opposing hand or a hard surface. The GripLock Finger can then release to full extension by depressing the dorsal pawl (lever) or flexing past last locking position. Adding a GripLock Finger can restore length, encourage bilateral hand use and be a valuable tool for participation in activities of daily living.

This device can be worn in combination with our MCPDriver, PIPDriver, and/or ThumbDriver.

This design is optimised for high load carrying capacity. The GripLock Finger weighs in at 25 grams and a break strength of ~97 kg.

SPECIFICATIONS:

- Load Rating: ~97 kg
- Device Weight: 25 grams
- Cycle Life: 300,000 cycles min

- Field serviceable fairings
- Silicone fingertip pad
- Machined aluminum
- Case-hardened stainless steel
- Conductive tip option for touchscreen use.
