

# Pro-Flex® Terra

“I’m rediscovering aspects of my mobility that I had forgotten about since my amputation.”

**Albert Lin, Ph.D.**

Explorer, Entrepreneur, Communicator

**Tom Triol is a recently retired photographer and videographer** for the Indiana State Police. He keeps busy walking, traveling, working around the house and yard, and birdwatching with his wife, Shelley. Tom needs a foot that allows him to enjoy his life pain and worry free.

Pro-Flex Terra's flexibility means that it remains flat on the ground at most angles. Tom receives more push-off power and reduced sound side impact due to the **1 Pre-Tensioned Carbon**. Furthermore, the **2 Single Anchor Point with Gliding Contact Pad** provides a "neutral range" rather than a "neutral point" on the foot, resulting in superior ground compliance. The **3 Pre-Compressed Foam** allows Tom to experience a smoother transition from heel to toe at any speed, leading to a more natural gait (which Shelley noticed right away).

"I can do any amount of yard work, we can go to concerts, we can enjoy functions with family and friends. I can help clean the house. I enjoy all of my hobbies without pain and without restriction. With Pro-Flex Terra, I can stay active and comfortable all day."

**Tom Triol**  
Retired Police Photographer

**Albert Lin is a National Geographic explorer and father of two.** His show *Lost Cities with Albert Lin* can involve caving, rock scrambling, hiking, and fording rivers. Albert needs a foot that can keep up with him, a **Waterproof** foot that he can trust in any terrain.

Pro-Flex Terra's exceptional flexibility means Albert's foot is always in contact with the ground, no matter how steep the slope is. The **1 Pre-Tensioned Carbon** unit provides consistent push-off power at those extreme angles. During Albert's high impact activities, the friction generated by the **2 Single Anchor Point with Gliding Contact Pad** delivers increased energy return and the **3 Pre-Compressed Foam** bumper dampens the impact of every step. All of these innovations in Pro-Flex Terra make Albert feel like the foot is matching his energy and can accommodate his demanding lifestyle.

"There are moments when I should be looking down to see what's underneath me, but now I look up to see what is in front of me. I'm rediscovering aspects of my mobility that I had forgotten about since my amputation."

**1 Pre-Tensioned Carbon**

- Increased flexibility provides greater range of motion
- Increased comfort while standing
- Same force to achieve higher energy return

**2 Single Anchor Point with Gliding Contact Pad**

- Accommodates minor shifts in weight while standing
- Provides a neutral range during midstance by allowing the point of contact to move as weight shifts from heel to toe
- Provides multi-axial rotation for better ground adaptation

**3 Pre-Compressed Foam**

- Provides progressive stiffness across a range of impact levels
- Smoother transition from heel to toe
- Increased dampening at higher walking speeds

Watch Pro-Flex Terra in action!

We collaborate extensively with prosthetic users during product development. Building from that feedback, we created lifestyle features that tackle issues that patients face every day. From a snap-on footshell to optional accessories like a sandal fix or heel wedges, each combines with Pro-Flex Terra to provide great performance across a diverse range of daily requirements.

**NEW! Footshell** – easy-to-fasten buttons enable users to quickly remove the foot cover for cleaning or drying

**Tread Design** – Ensures traction and stability with or without the foot shell

**Heel Wedges†** – an optional heel wedge allows for extra stability while doing vigorous activities

**SandalFix†** – allows users to wear open heel footwear by securely attaching the heel of the foot cover to the sandal
