

# GripLock Finger®

## Simple Strength for Everyday Tasks

The GripLock Finger is a positionable prosthetic finger designed for complete finger absence of the index, middle, ring, or small finger. It gives you dependable support for tasks that need a steady hold or a stabilising hand.

### A Simple, Sturdy Assist for Daily Activities

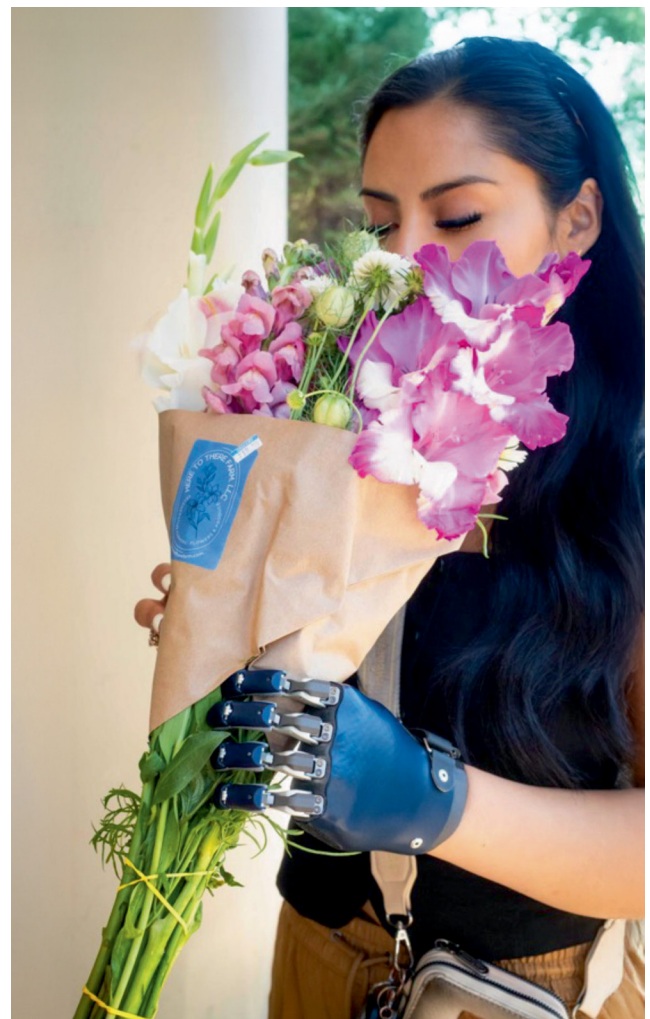

Simple Strength. Sometimes you just need a steady hand to hold a tray, carry a bag, or stabilise a project. The GripLock Finger locks in to place so you can depend on it during two-handed tasks.

### Stable Grip When You Need It

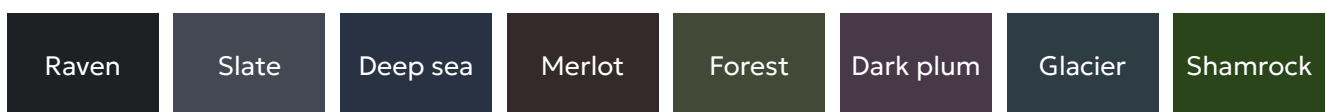

The GripLock Finger provides a stable, reliable hold, making it easier to manage objects securely. It supports multiple pinches and grasps, helping you perform everyday tasks - from holding a cup to keeping a cutting board steady while you prepare food.

### Built for Practical Use

Made from durable, lightweight materials for long-lasting performance, the GripLock Finger is engineered for environments where reliability matters, including exposure to fresh, salt, or chlorinated water.

## Colours

Please note that due to the manufacturing process, variations in the colour, shade, and tone of nylon components and anodised fasteners may occur.
