

LivingSkin®

The Confidence to be Seen

LivingSkin is handcrafted to reflect who you are - your skin tone, your details, your identity. It's designed to go unnoticed whether you're greeting someone or simply walking into a room without your prosthesis becoming the focus.

Designed to blend into your daily routine

Each LivingSkin prosthesis is created with care to mimic the appearance of your hand or fingers. Skilled artists hand-paint every piece, building colour from within a clear silicone layer so it captures depth and realism. Fine details, like freckles, fine hairs, birthmarks, scars, or even tattoos can be added to make the prosthesis look uniquely yours.

Functional Support When You Need It

While LivingSkin is primarily cosmetic, it can still support light functional tasks such as pushing, pulling, or stabilising objects - small actions that make daily life easier.

Adjustable for Task-Specific Positioning

LivingSkin can be fitted with internal structures that are adjustable, to position the fingers for occasional tasks.

Durable, Versatile Silicone

Made from high-definition silicone, LivingSkin is durable, versatile, and virtually stain-proof, helping it stay looking natural day after day.
