

ThumbDriver®

Bring Back Your Ability to Pinch, Hold, and Do More

Losing part of your thumb affects almost every daily task. The ThumbDriver is designed to allow the thumb tip to meet your fingers, so you can pinch, grip, and hold securely.

Designed Around Your Natural Thumb

Carefully adjusted to your hand, the **ThumbDriver** is powered by you. By using the movement of your remaining thumb, the device mimics the way an intact thumb moves. When you move, it moves, giving you simple, intuitive control.

Reliable Grip for Real-Life Tasks

The **ThumbDriver** supports a wide range of grips, allowing you to hold different shaped objects securely, whether you're picking up a pen, opening a door, using tools, or lifting everyday items.

Return to Two Handed Activities

You can count on a stable, dependable hold that helps you return to two-handed activities.

Built for Daily Life

Made from strong, durable materials and precision-built for your exact measurements using high-grade 3D technology, the **ThumbDriver** is designed for everyday living. It stands up to real-world conditions, whether you're washing dishes, gardening, working in a workshop, or cooking. It's engineered to withstand fresh, salt, and chlorinated water.

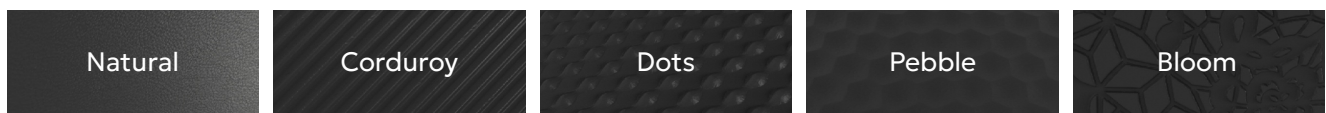

Adaptable to the Task at Hand

You can adjust the tip angle to match the way you need to use it for any activity, giving you the flexibility required for precision tasks.
